

Hepatitis in California's American Indian and Alaska Native Population

Hepatitis A

Reported Average Annual Hepatitis A (HA) Incidence and HA-Related Mortality by Race/Ethnicity, California, 1989-2000

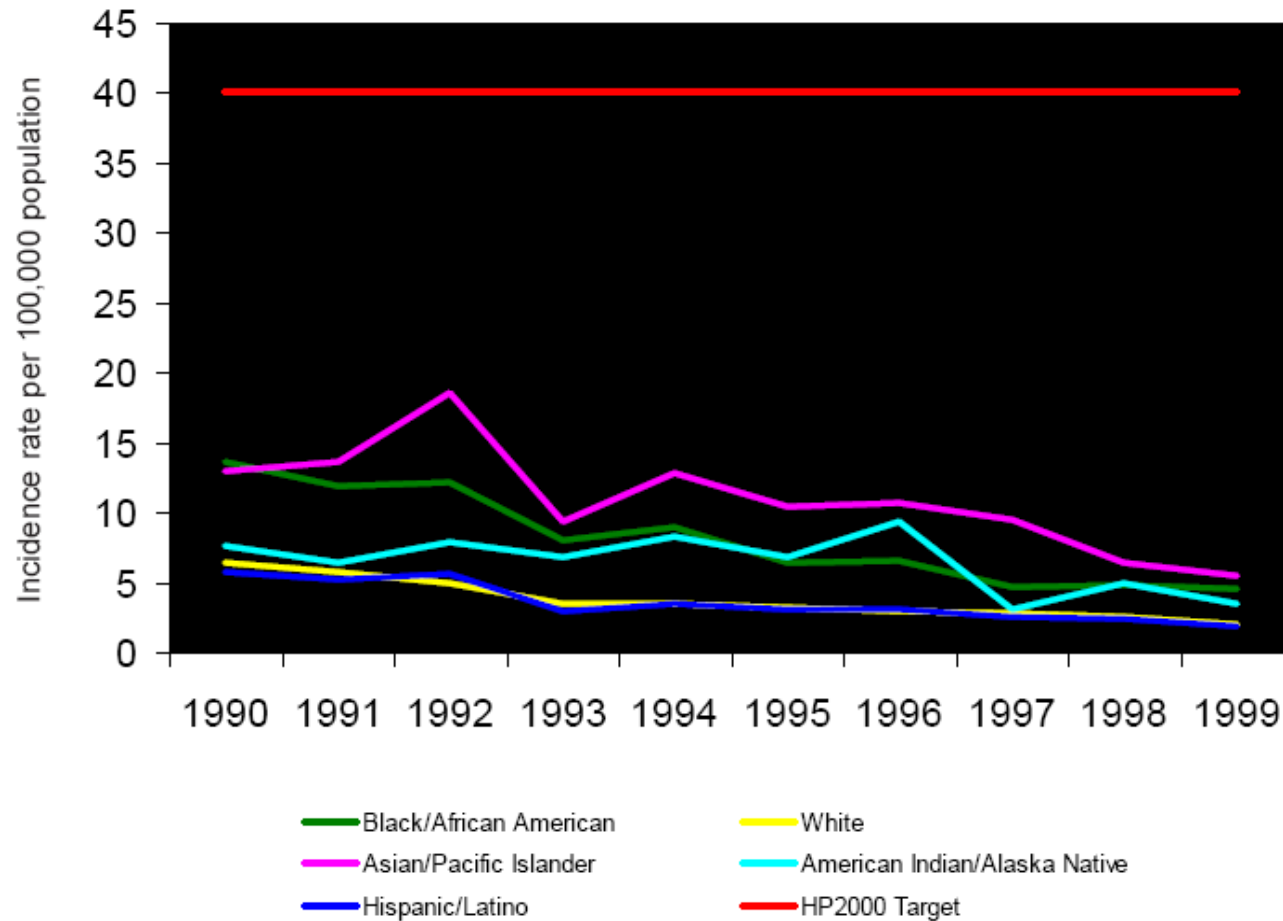

* Rates expressed per 1 million person-years.

* Age-adjusted rates among the Native Americans/Alaska Natives are unstable because of the small number of cases and the relatively small amount of person-time.

American Journal of Public Health, Vol 95, No. 5 (May 2005). http://www.ph.ucla.edu/epi/faculty/publications/Sorvillo_AJPH_2005.pdf (Page 4)

Hepatitis B

Hepatitis B Case Rates by Race/Ethnicity, California, 1990-1999

* Hepatitis B case rates for **American Indians/Alaska Natives** were unreliable in each year due to the small number of events (less than 20), and conclusions could not be drawn from these data.

Source: The California Health and Human Services Agency and the California Department of Health Services (CDHS), *Multicultural Health Disparities: California 1990-1999*.
